It's becoming very dangerous to sit in the sun. If you have a suntan, it doesn't mean that you have lots of outdoor activities, but it does mean that you are in greater danger of getting skin cancer and cataracts. The ozone layer, which protect us from the sun's dangerous ultraviolet rays, is progressively deteriorating. In February 1992, a scientific report said, the people in Canada, Northern Europe and Russia were in serious danger. In 1985, Australia, there are now three times more cases of skin cancer than in the past. In New Zealand, teacher tells school Children to wear caps and not to sit in the sun. Mostly chlorofluorocarbons (CFCs) that destroy ozone layer are caused by aerosol sprays, refrigerators, air conditioners, as well as chemical industry. Countries believe that they have other problems which are more important. Now strict measures should be taken, because already lot of damage has been done.
